

## **SPRINT 16**

### **Test for SetStats Website v1**

**SUS score = 77.08333333**

#### **Scenario**

An SUS(System Usability Scale) test was performed for the SetStats Website where the users were allowed to use the website's prototype version 1. The majority of users were those who go to the gym and lift weights while a few users were those who are planning to start working out. All the users were explained about the SetStats product idea before beginning the test.

#### **Tasks**

Each user was asked to perform 3 tasks along with using the basic features of the website:

- Register on the Website
- Check session history for a deadlift when logged in
- Reset their password

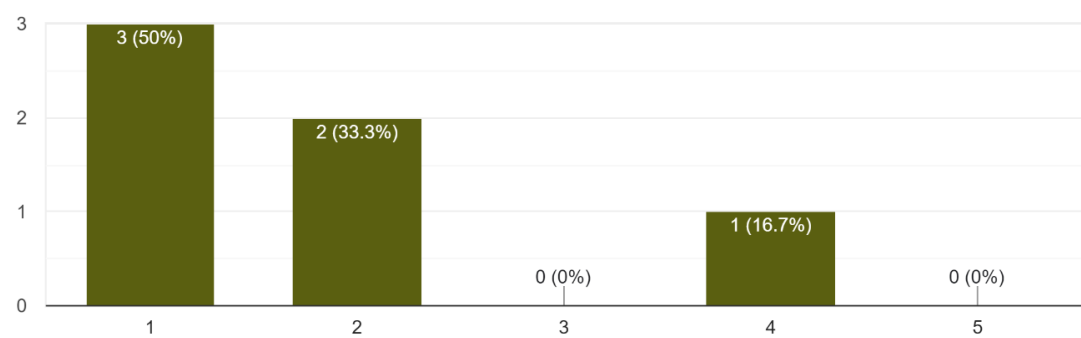

#### **Key Findings**

- The tested system passed with a score of 77.083 which is more than the average SUS score of 68 for any system to pass.
- 100 percent of the users found the system very easy to use
- 83.33 percent of users agree that they did not need any previous knowledge in order to use the system
- There was one outlier during the test with a score of 52.5 (rest all the other users had scores of 75+)

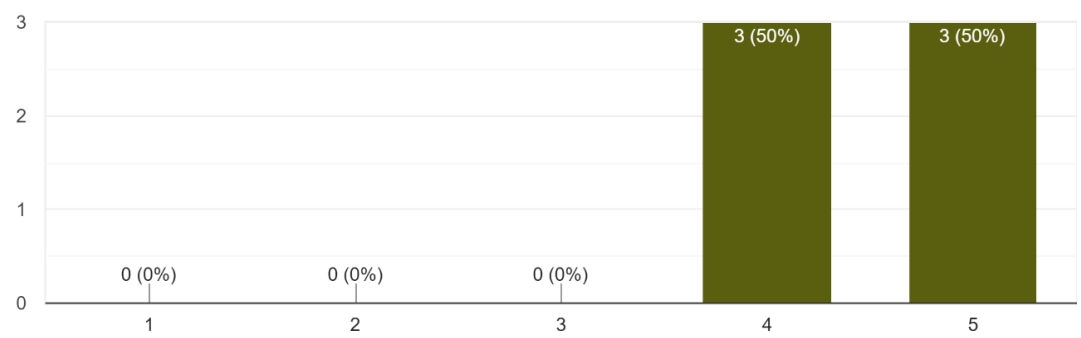

I found the system unnecessarily complex.

6 responses

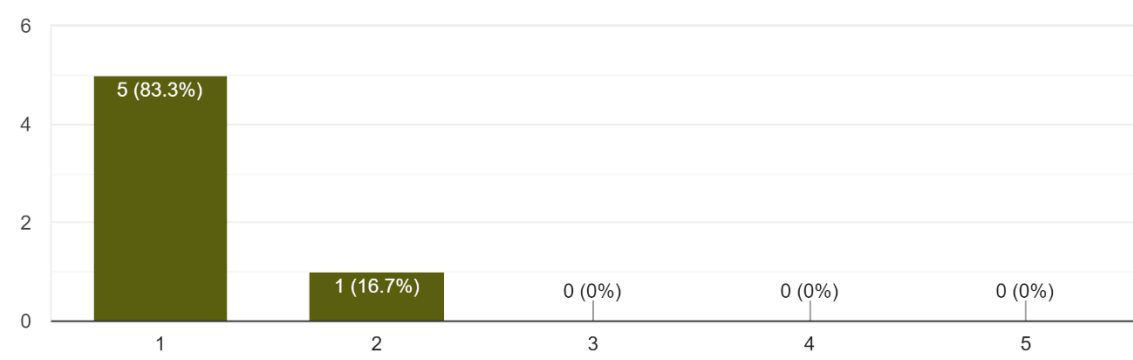

I thought the system was easy to use.

6 responses

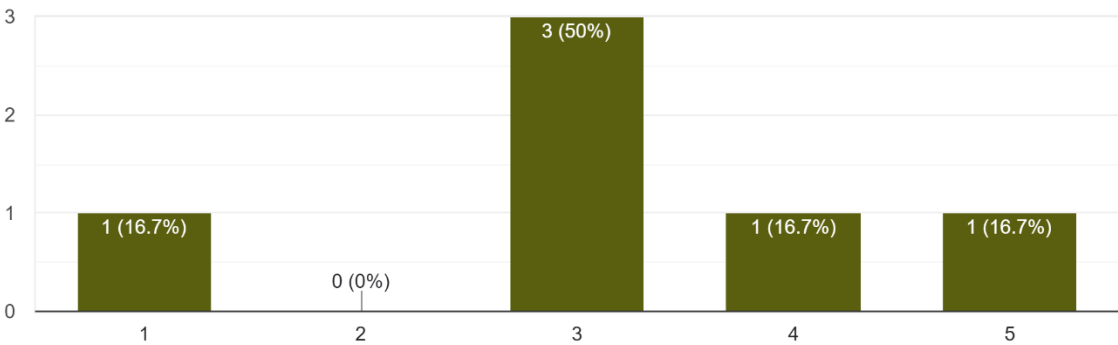

I think that I would need the support of a technical person to be able to use this system.

6 responses

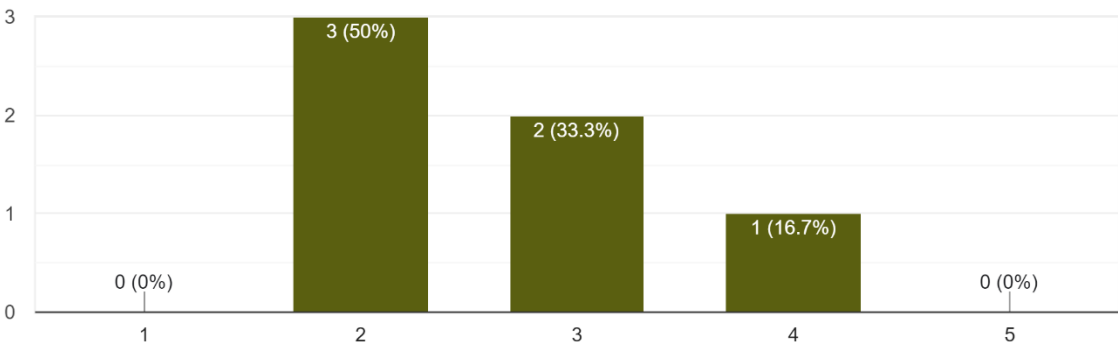

I found the various functions in this system were well integrated.

6 responses

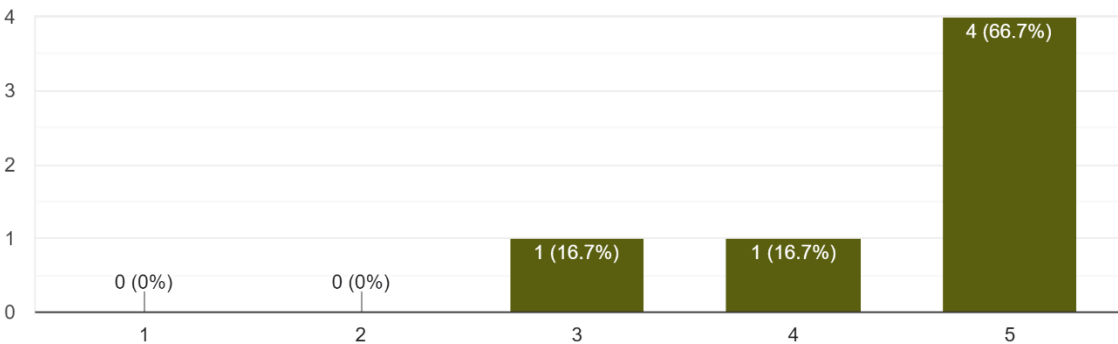

I thought there was too much inconsistency in this system.

6 responses

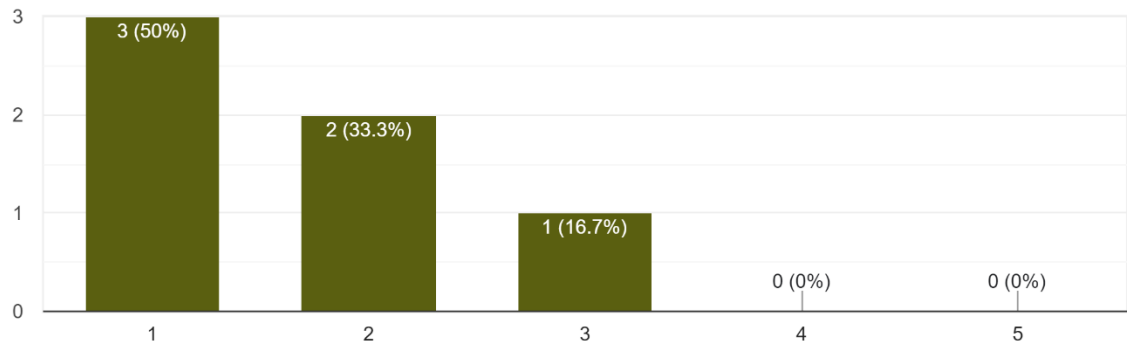

I would imagine that most people would learn to use this system very quickly.

6 responses

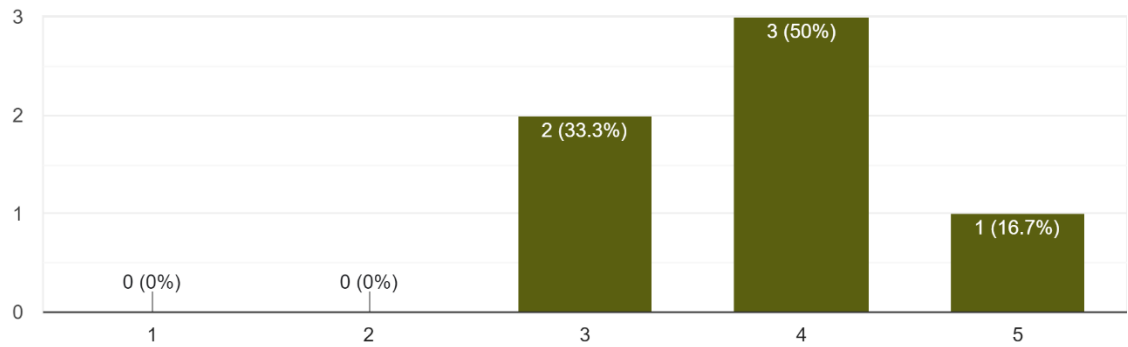

I found the system very cumbersome to use.

6 responses

I felt very confident using the system.

6 responses

I needed to learn a lot of things before I could get going with this system.
